

## New effective BICOM therapy combinations which save time – (not just) with difficult patients

Dr. med. Jürgen Hennecke and Simone Maquinay, Bicom Therapist, Aachen, Germany

### 1. Introduction

Years ago therapists practising bioresonance therapy fell into one of two camps: one championed therapy with endogenous frequency patterns using the body's own fluids and multiple therapy programs with the input and output on the patient. The other group advocated applying test ampoules (Combined Test Technique) with an A or Ai program to the patient seated at the output. They have now made peace and most advanced Bicom therapists combine both methods.

In practice therapy sessions usually begin with basic and follow-up therapies incorporating endogenous oscillations. Stresses are then eliminated and finally organ and meridian ampoules applied to stabilise the patient. This made therapy sessions very long, particularly with difficult or sensitive patients, and was not always easy to organise.

We spotted a clever idea in a dental practice: the patient is connected to **two** Bicom devices **at once!** Wound healing programs are applied with one device, for example, while stabilising organ ampoules are applied in parallel with the other using "A".

The solution: all practices should have two Bicom devices! Much to Regumed's delight.

However, the company understands that therapists have limited space and so now offers a more advanced device with an additional therapy module which is described as a **second channel**.

The idea is not totally new. When the

**modulation mat** was introduced, this provided the opportunity, in addition to Bicom programs, of also applying, through the **DMI function**, specific frequency patterns and information from precious stones which have the effect of **building up** or **attenuating** energy. Our tests reveal that, on average, most patients need "strengthening" therapy, a few "attenuating" but that a number of patients do "not need either". The frequency patterns selected here for this group of patients are probably nowhere near specific enough. Systematic use of stabilising information would be helpful.

### 2. The "second" channel

We have been testing the possible uses of the second channel in our practice for over a year.

**Initial fears that too much therapeutic information would overload the patient's regulatory system, placing excessive demands on their body, proved unfounded. Instead our impression is that channel 1 therapies are tolerated better and more easily accepted, meaning hyperintensive reactions occur less often.**

In **channel 2** we usually used the **CTT** (Combined Test Technique) ampoules applied with "A", especially the meridian/organ ampoules of the "5 element" set but also the "eliminating ampoules" from the "5 element", "allergy" and "viruses/fungi" test sets and the vertebral and joint ampoules from "orthopaedics". The "attenuation ampoules" should only be used on their own however.

We also applied flower essences (e.g. Bach flower remedies), precious stones (individually or in combination), colours, essential oils, conventional medical or naturopathic medication as well as homeopathic remedies, phytotherapeutic agents and probiotics.

Testing the **parameters for channel 2** usually gives **amplifications between 0.8 and 20x** and **therapy times of between 5 and 15 minutes**.

If there is insufficient time for individual testing, **2.0x amplification** proved effective and **therapy time** is adjusted to the length of the **main program in channel 1**, in other words, simply let it run ... (see **Tables 1, 2, 3** on page 29f.).

**Applying these different therapeutic approaches simultaneously represents a significant time saving for both therapist and patient!**

*This also gives us an interesting variant of **Chakra therapy**:*

#### Channel 1:

Input: coccyx (flex. electrode)

Output: Chakras

(button electrode, depth probe)

Input cup: blood, hair

#### Channel 2: colours, precious stones

Amplification and therapy time:

Chakras 1-3: 1.8x; 3 mins.

Chakra 4: 1.2x; 3 mins.

Chakra 5: 2.0x; 3 mins.

Chakra 6: 0.7x; 2 mins.

Chakra 7: 2.0x; 1 mins.

### **3. Amplification sweep**

(see **Table 4** on page 31)

Used to eliminate chronic stresses such as allergens, toxins (especially heavy metals) and pathogens and with sensitive patients it has proved effective to begin therapy with low amplifications and gradually increase the amplification stages, over several sessions if necessary. We have observed for

the past three years or so that, especially with acute symptoms, beginning with high amplifications and then reducing the amplification stages proved more successful. This has also proved true with acute pollen therapy.

We therefore went to Regumed with the suggestion of creating a **decreasing amplification sweep**, in addition to the **increasing amplification sweep**. We have obtained excellent results with this when treating **viruses, bacteria and parasites**.

At Frau Karz' suggestion a **symmetrical amplification sweep** has also been incorporated, in other words, the amplification increases, decreases again, and so on, always alternating.

This function has proved effective in **allergy therapy**, especially with **acute symptoms** (e.g. hay fever). The effect is very quick-acting and intensive. **Therapy time 8-12 minutes**. In some cases brief follow-up treatment (1-3 mins.) was necessary at a particular amplification stage (e.g. 64x). The symmetrical amplification sweep also proved effective as a supplement following "serial therapy".

Care should be taken with sensitive patients. We observed a violent primary immune response in an asthmatic following this type of therapy for mould. The central allergies should also be treated with the old tried and tested programs at the start.

### **4. Extremely low frequencies**

We have observed that **basic therapy** using extremely low frequencies **between 1 Hz and 10 Hz** has a far stronger effect than earlier basic therapy on its own. For us the patient's subjective response and the colouring of the foot print on the footplate were important criteria in deciding the intensity of therapy.

The extremely low frequencies obviously address totally different resonance levels

from those used in the past. With tireless testing, Frau Karz has created a series of new therapy programs, some of which we were able to test on our patients. Here too we observed excellent outcomes.

## Examples:

### **Program 3007 (H+Di, 1.7 Hz) and 3066 (H+Di, 11.3 Hz):**

*Highly effective with thyroid disorders, e.g. thyroiditis*

### **Program 3052 (H+Di, 8.4 Hz):**

*Supplements intestinal therapy, e.g. irritable bowel, colitis*

### **Program 3058 (Di, 8.9 Hz):**

*Dental root treatment, can be used for all dental foci, important therapy block!*

*We also tested two other interesting programs from our own observations:*

### **Lymph activation:**

**H 3.2x Di 8x; 2.7 Hz, 6 mins.**

### **Inflammation of the large intestine:**

**H 2.0x Di 0.2x; 3.0 Hz, 5 mins.**

**The programs with extremely low frequencies can be combined with high frequency programs in the same session without causing any problems!**

## **5. Summary**

The new therapy modules as well as **channel 2, the decreasing and symmetrical amplification sweep and extremely low frequencies** all represent valuable additions to the range of possibilities offered by bioresonance therapy. With more widespread use many other creative therapists will undoubtedly discover further areas of application. The new therapy options allow us to treat our patients more intensively in a manner which they are better able to tolerate and yet which also saves time.

**Table 1: Proven CTT ampoules for channel 2**

<b>Indication</b>	<b>Channel 1</b>	<b>Channel 2</b>
Neurodermatitis	Allergy program	Skin, large intestine, liver
Asthma	210, 240, 423	Lungs, bronchi, large intestine
Sinusitis	500, 922	Paranasal sinuses, bladder, lungs, large intestine
Pollinosis	Allergy program	Lungs, large intestine, paranasal sinuses, allergy
Intestinal problems	560, 565, 460	Large intestine, small intestine, liver
Detoxification	970, 930	Liver, kidneys, lymph, impaired elimination
Hormonal imbalance	980, 981, 934	Male/female hormones, triple warmer
Spine	915, 581, 981	Gallbladder, liver, spine
Joints	922, 370, 610	Gallbladder, liver, large/small joints
Liver, gallbladder	430, 431, 370	Liver, gallbladder, large intestine
Kidneys	480, 481, 482	Kidneys, bladder
Lymphostasis	930, 830, 610	Kidneys, lymph, liver
Immunodeficiency	480, 570, 580	Lymph, kidneys, large intestine
Heart, cardiovascular system	904, 960, 240	Heart, cardiovascular system, kidneys
Gastric problems	461, 861, 330	Stomach, pancreas
Pancreas	580, 829, 852	Stomach, pancreas, metabolism, organ degeneration
Eye problems	520, 418, 430	Liver, metabolism, sensory organs, organ degeneration
Cerebral dysfunction	571, 572, 535	CNS, brain, metabolism, organ degeneration
Peripheral nerves	911, 900, 271	Metabolism, organ degeneration

**Table 2: Medication for channel 2**

Indication	Channel 1	Channel 2
Intestinal mycosis	Candida (Ai)	Nystatin, amphotericin, Sanum preparations
Intestinal dysbacteria	560, 565, 930	Probiotics, Sanum preparations
Immunodeficiency	428, 570, 593	Echinacea, propolis, thymus extract
Detoxification	970, 930, 430	Vitamin C, selenium, "lymphatic agents"
Organotherapy	Organ program	Homeopathic complexes
Neurodystonia	900, 423, 911	Bach flower remedies, Rosalinde flower essences
Spine, joints	915, 911, 851	Zeel, Traumeel, devil's claw
Bacterial infections	Bacteria (Ai)	Antibiotics, propolis
Viral infections	Viruses (Ai/Di)	Engystol, propolis

**Table 3: Special indications**

Indication	Channel 1	Channel 2
Elimination of scar interference	910, 900, 927	Rock crystal
Radiation exposure	700, 701, 702	Mineral blends
Pain therapy	133, 918, 911	Flower essences (Bach, Rosalinde)
Neurodystonia	900, 432, 911	Rock crystal, karneol, garnet, chrysopras
Hyperintensive reactions	127, 128	Rescue drops (Bach flower remedies)
Wound healing	910, 952, 930	Rose quartz
Spine, joints	915, 581, 911	Rock crystal
Lack of energy	580, 583, 105	Flower essences
Nutrient points	see therapy manual for programs	Vitamins, minerals
Chakra therapy	Input cup: blood, hair	Precious stones, colours

**Table 4: Amplification sweep**

**Increasing amplification sweep**

Ai, 11 kHz	Toxins	Prog. 979
Ai, 25 kHz	Viruses	Prog. 978

**Reciprocal amplification sweep**

H+Di, 52 kHz	Food	Prog. 977
--------------	------	-----------

**Decreasing amplification sweep**

Di, 25 kHz	Viruses
Ai, all frequencies	Bacteria, parasites

**Symmetrical amplification sweep**

Ai, Di, H+Di 52 kHz, frequency sweep 6 secs., all frequencies	Acute allergies
--	-----------------
